源码:

```
import cv2
from PIL import ImageFont, ImageDraw, Image
import numpy as np
my photo = cv2.imread('myphoto.jpg', 1)
cv2.imshow('show my_photo', my_photo)
cv2.waitKey(0)
cv2.destroyAllWindows()
photo_copy = my_photo.copy()
img text = Image.fromarray(cv2.cvtColor(photo copy,
cv2.COLOR BGR2RGB)) # 转换为 PIL 库可以处理的图片形式
# 设置字体和大小 这里用到的是 mac 自带的字体
font path = "/System/Library/Fonts/STHeiti Medium.ttc" # 替换为你的字体
font size = 40
font = ImageFont.truetype(font path, font size)
text = '22122128 孔馨怡'
# 文本位置
# 设置文本颜色(红色)
color = (255, 0, 0)
# 创建 Draw 对象
draw = ImageDraw.Draw(img text)
photo_with_text = cv2.cvtColor(np.array(img_text), cv2.COLOR RGB2BGR)
#保存图片
```

显示带有文本的图片

cv2.imshow("Image Text", photo_with_text)

cv2.waitKey(0)

cv2.destroyAllWindows()
